

AH SERIES

The AH Series of structures, more commonly referred to as Aluminum Halls – is the work horse of the Universal line of fabric structures.

The AH Series offers a versatile, durable building option for temporary or semi-permanent shelter needs where speed of installation or relocation is essential. It is designed to be:

RELOCATABLE

The AH has been designed to be installed quickly for temporary or permanent projects. With erection speeds of up to 10,000 square feet per day with only a five man crew, no other system comes close. In addition, most sizes do not need cranes, reducing installation costs even further, and none of the structures require footings or foundations. With AH, you also have the confidence that if usage needs change, it can be cost effectively relocated. In today's quickly changing environment, it is priceless to have this kind of flexibility for your building.

AIRTIGHT

Very airtight right out of the box, the ASH can be converted to complete airtight solutions for a nominal extra cost, opening up applications in environmental protection, dry storage and long lasting fumigation.

ATTRACTIVE

With a full range of colors, digital printing, stripes and motives, only your imagination limits the possibilities for your structure's appearance. AH is designed to work with the highest quality of fabrics with additional protective coatings. A translucent fabric creates a daylight environment.

EXPANDABLE

When the need arises, your structure can be expanded by moving the gable end and adding more bays at any time. Doors and other openings can be added anytime with minimal effort.

FLEXIBLE

Designed with various insulation options, that are equally relocatable, the AH integrates with HVAC equipment, is completely watertight, and has options for hardwalls and steel fiber fabrics when vandalism could be an issue.

RELIABLE

Universal has so much confidence in this product that it provides up to a full 10 year system warranty. Your project is managed by a professional in-house project manager and installed with attention to the smallest detail by highly qualified installers that are trained in this product. Your building deserves it!

AH SERIES

Consider The Universal Advantages:

SPECIFICATIONS

- Aluminum frame
- Width — 40'-164'
- Length — Indefinite (13' or 16' modules)
- Height — Approximately 45% of width
- 8,300 square feet in a single container
- Standard wind load of 90 mph
- Flame retardant fabric (meets California Fire Marshall NFPA 701 standards)

CHARACTERISTICS

- Available from inventory
- Rent or purchase...worldwide!
- 100% relocatable
- Unobstructed freespan space
- Maintenance free
- Flat or round ends
- Can be environmentally controlled in any climate

INSTALLATION

- No footings required for short term installations; footings required for permanent or long term installation based on site conditions and code
- Installation rate 5,000 square feet per day; faster if required.

OPTIONS

DOORS

- Cargo & personnel doors in many sizes

INSULATION & ACOUSTIC LINERS

- Thermal insulation liners available

ELECTRICAL & LIGHTS

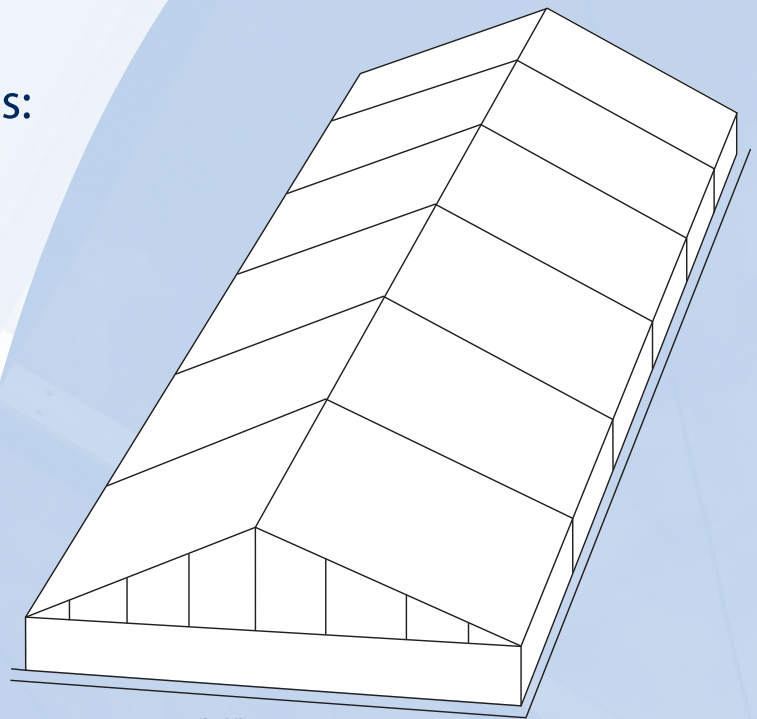

- Complete electrical and lighting packages

HVAC

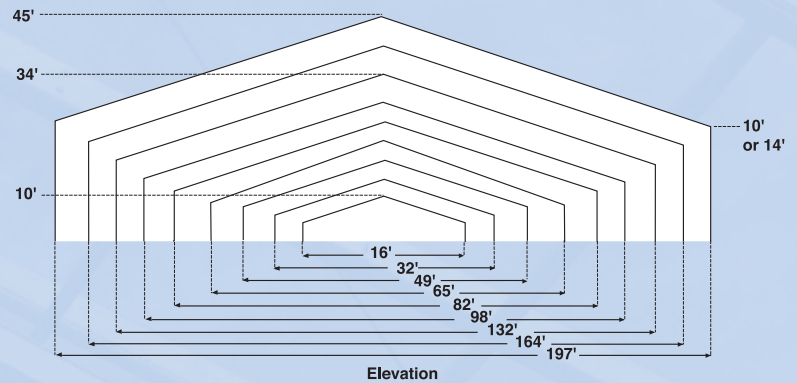

- Complete HVAC packages available
- Ventilators available on all models

WARRANTIES

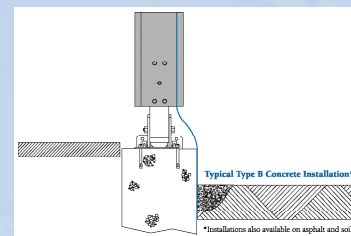

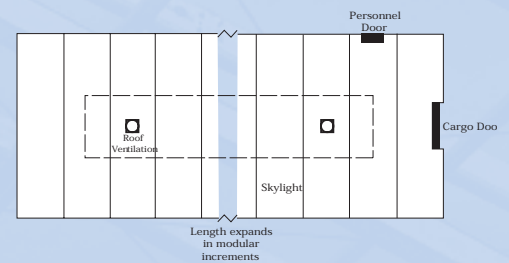

- 12-15 year fabric life or longer based on climate conditions
- Standard ten year warranty
